Competenze professionali

Le principali competenze, maturate in oltre 20 anni lavorativi-formativi *post lauream*, riguardano la ricerca transazionale, finalizzate alla progettazione ed alla divulgazione di sistemi e tecnologie utili alla prevenzione, la diagnosi e la terapia, innovativa ed avanzata (medicina bio-rigenerativa, terapia genica), di patologie, soprattutto croniche e degenerative, del distretto testa-collo.

Nell'ultimo decennio, l'interesse è stato rivolto, in modo particolare alla sperimentazione di:
 i) dispositivi per il rilascio trans-mucosale, modulato e controllato, di farmaci per la cura di patologie neuro-degenerative e per il loro monitoraggio domiciliare; ii) *networks* applicati alla *E-health*, ed in particolare, alla Tele-odontostomatologia; iii) ricerca clinica su emocomponenti (PRP, PRF) e scaffold per procedure chirurgiche odontoiatriche; ricerca in vitro e in vivo (su animali) per cellule staminali osteogeniche (medicina rigenerativa) da polpa e tessuti gengivali. Si rimanda, per il dettaglio, alla sezione PROGETTI
