3rd INTERNATIONAL SYMPOSIUM ON MEDICATION RELATED OSTEONECROSIS OF THE JAWS (MRONJ) COPENHAGEN 2019

Introduction

Medication Related OsteoNecrosis of the Jaws (MRONJ) is a serious complication to antiresorptive treatment meant to reduce unwanted skeletal events for cancer and osteoporosis patients. MRONJ can lead to pain in the jaw, loss of teeth and jaw bone, impaired chewing function, and thereby loss of quality of life.

Following the First and second International Symposium held in Copenhagen in 2017 and 2018, we have invited thirteen European experts, who will update you on the latest scientific results. The speakers are highly recognized clinicians and scientists from Germany, Italy, England, Greece, Switzerland, Norway, Sweden and Denmark. The target audience are private practitioner dentists, clinicians, maxillofacial surgeons and other specialists, as well as students and trainees with an interest in MRONJ.
