Presentation

The Joint International Symposium is conceived as a high-profile event focused on the improvement of patients' therapeutic management and clinical innovation and on the promotion of European cooperation. This scientific meeting continues the longstanding tradition of cultural and scientific initiatives organized by SIPMO and by the European Association (EAOM), to which SIPMO is affiliated. It also represents, for the Italian and international scientific community, an established opportunity for updating and discussion, dedicated to the clinical and therapeutic evolution of oral medicine. In the current edition, we are also pleased to welcome the participation of the Hellenic Society of Oral Medicine, which likewise belongs to EAOM Area IV–V. Their presence further highlights the broader European dimension of the event, with the aim of strengthening scientific dialogue among European specialists and fostering multidisciplinary discussion on the most recent therapeutic strategies.

The synergy between European scientific societies promotes the harmonization of clinical guidelines, the development of multicenter studies, and the strengthening of an international professional network.
The congress thus becomes not only a moment for scientific updating, but also a strategic opportunity for professional growth, academic collaboration, and the development of new shared research projects.

Rationale

The title "Beyond Diagnosis: Therapeutic Strategies in Oral Medicine" highlights the crucial transition from the correct identification of a disease to the definition of personalized therapeutic pathways based on the most up-to-date scientific evidence.
The congress therefore focuses on:

- therapeutic innovation in the management of different oral cavity diseases
- management of autoimmune and chronic inflammatory diseases
- new perspectives in oral oncology
- pharmacological therapies in orofacial pain
- an integrated and multidisciplinary approach to the complex patient

The meeting will include:

- Lectio magistralis
- Thematic plenary sessions dedicated to the most recent therapeutic evidence
- Interactive round tables
- Poster sessions and oral communications to highlight emerging research

Special attention will be given to young researchers and residents, with awards and dedicated sessions for the presentation of their work.
